

COULD YOU HELP TO SUPPORT A FUTURE LEADER IN ENGINEERING THROUGH MENTORING?

Arkwright Engineering Scholarships identify and nurture future leaders in engineering, the Scholarships support high-calibre, engineering-minded students over two years of sixth form before they move onto University or a higher degree apprenticeship. Some of Arkwright's sponsors are unable to offer mentoring for their Scholars, and in these cases, Arkwright looks to partner an engineering professional with a Scholar to support and guide them during this critical time in their education.

Mentors should be experienced individuals who can draw on and share their experience and knowledge with the mentee. The mentor is there to assist the mentee to grow and develop towards their potential, manage changes and grasp opportunities.

Mentoring one of our Scholars takes place through an online communication platform, however, with parental approval, phone calls, site visits and face-to-face meetings can be arranged.

What are the benefits to you?

- Enhance your mentoring skills;
- Help to guide a young engineer;
- Share your knowledge and experience;
- Improve job satisfaction;
- Support you in gaining Professional Engineering Institution (PEI) membership

What are the benefits to the Scholar?

- Increase your understanding about yourself and situations;
- Develop and practise your listening skills;
- Learn from your Mentor;
- Improve your self-motivation;
- Encourage self-reflection and develop a broad skillset;
- Broadening knowledge of engineering as a discipline

Arkwright would like to identify potential new mentors, across all engineering disciplines, ready for our new intake of Scholars. If you are interested in exploring this further without commitment, please contact Arkwright at mentoring@smallpeicetrust.org.uk and we will send you further information.
